PRODUCT STRATEGY 2026

Comprehensive upgrade strategy for FinViet

B2B FMCG Distribution Operating System

OVERVIEW

Five-pillar strategy framework

PILLAR 1

Buying

Merchant self-ordering & proactive sourcing

PILLAR 2

Selling

Retail POS & Legal Compliance

PILLAR 3

Wholesale

Closing the loop between Brand and Distributor

PILLAR 4

Loyalty

Merchant Loyalty app & Gamification

PILLAR 5

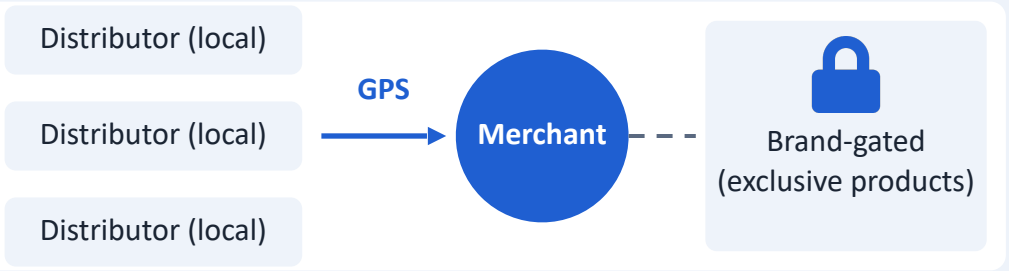

Reduce Sales Tasks

Shift to Merchant self-service

Closed loop **Buying → Selling → Wholesale → Loyalty → Reduce Sales Tasks → back to Buying**

Open Marketplace & Frictionless Onboarding

1.1 Open Marketplace & Brand-gated

- Shift from waiting for Brand approval to an open B2B marketplace run by regional Distributors: enter an address and the responsible Distributor is mapped automatically.
- Hybrid Display: Brand-gated products are only sold after the Brand approves the link with the Merchant.

RESULT

Grow GMV and the Merchant base while still complying with each Brand's exclusive distribution policy.

1.2 Frictionless Onboarding (under 60s)

- Remove eKYC, national ID and Business License from the default flow; only Phone (OTP) + Store Name + delivery address are required.
- Documents become a Conditional Step only when requesting a connection to a Brand with strict requirements.

RESULT

Viewing prices and placing the first order in under a minute: the Distributor only needs to know who to deliver to, and where.

AI Semantic Search

Merchant types		AI understands (Search Intent)
instant noodles	→	**instant noodles**
soy sauce	→	**soy sauce (regional name)**
adhesive tape	→	**tape**
sour & spicy	→	**Hao Hao sour & spicy shrimp noodles**
coke case (slang)	→	**Coca-Cola (case)**

1.3 Natural-language semantic search

- Replace exact keyword matching with Semantic Search (AI/NLP).
- Understands synonyms, FMCG slang, misspellings, typing without accents, and regional names across the North, Central and South.
- Captures search intent instead of exact wording, avoiding "product not found" when a Merchant uses a different name from the Distributor's ERP.

RESULT

Higher search success rate and cart conversion.

Upsell & Cross-sell Recommendation

1.4 Upsell: reach the MOQ with the same Distributor

- Market Basket Analysis suggests items commonly bought together from the Distributor handling the order (beer + soft drinks; cooking oil + sugar / fish sauce).
- Show progress toward Freeship / MOQ directly in the cart.

EXAMPLE

"Add one case of soft drink X to qualify for free delivery / meet the MOQ from Distributor [Name]."

1.5 Cross-sell: other Distributor / Brand

- Suggest alternative products in the same category from other Distributors/Brands on the product page and in the cart footer.
- Criteria: lower wholesale price, deeper promotions, or sponsored placement (Retail Media Network, Sponsored Products).

RESULT

Merchants get better margins; FinViet gains a new revenue stream (monetization).

Forecast & Recommend Order (3 modes)

1.6.1

Repeat Last Order

- A widget that brings the full item list of the latest successful order to the home page.
- Merchant taps "Reorder this order" in a single action.

RESULT

One-tap reorder, with no need to find each SKU again.

1.6.2

Depletion Rate Forecasting

- Based on purchase history and the store's average stock turnover.
- Automatically calculates when stock will run low and sends a notification with a pre-filled cart.

EXAMPLE

"It has been 7 days since the last cooking oil purchase. Place the order now so it arrives before the weekend."

1.6.3

Seasonal Order Suggestion

- Proactively push order templates ahead of special occasions.
- Cakes, candy, jam and beer one month before Tet; soft drinks and ice cream before hot spells; school supplies before the new school year.

VALUE

Digitizes the Sales rep's role of reminding stores to order, turning the app into an automatic purchasing assistant.

Flash Sale & Brand Dedicated Storefront

1.7 Flash Sales & Exclusive Vouchers

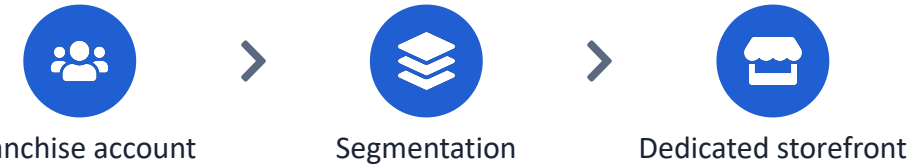

- Fixed-slot flash sales (e.g. 10 a.m. Tuesday and Thursday), with a limited number of units per store.
- Voucher Hub: direct discounts on orders, cashback to wallet, shipping fee support. Sales cannot apply vouchers on the Merchant's behalf.

VALUE

If calling Sales and ordering in the app give the same price, the Merchant chooses to call Sales. Exclusive offers motivate self-ordering.

1.8 Brand Dedicated Storefront

- White-label storefront for Brand-owned store chains and franchisees (e.g. the Tho Phat steamed bun chain, ice cream and milk dealers).
- Shows only that Brand's catalog, wholesale prices and support programs; hides the general grocery catalog.

VALUE

Brands control product flow and avoid competing products; FinViet expands into specialized F&B and retail chains.

E-invoice & Auto-sync Catalog

2.1 E-invoice & Digital Signature

- Integrates Remote Signing / Cloud HSM and e-invoicing from the cash register (Circular 78 & Decree 123) in the retail module.
- Digitally sign and transmit tax-authority-coded invoices with a single tap.

WHY

Household businesses with revenue over VND 1 billion per year must issue e-invoices from their cash register. No bulky signing device is needed.

2.2 Auto-Sync Catalog

- Every successful wholesale order from a Distributor syncs automatically to the store's retail inventory.
- Pre-fills standard name, barcode, image and suggested retail price (SRP).

RESULT

Saves 90% of setup effort: store owners do not need to type each item among thousands of SKUs, and can start selling right away.

Smart QR & Digital Debt Ledger

2.3 Dynamic VietQR & Voice Box

- Dynamic VietQR / Napas247 QR automatically shows the exact order amount.
- A Smart Soundbox or phone/Bluetooth speaker reads the amount aloud when the account is credited, which helps prevent fake transfer receipts.

EXAMPLE

"FinViet received 65,000 VND."

2.4 1-Tap Digital Debt Ledger

- "Record debt" right on the payment screen: pick a name from contacts, confirm, and the amount and items are recorded automatically.
- Send a debt statement via Zalo/SMS with polite wording, in one action.

RESULT

Replaces paper debt books that are easy to lose. Collects debt gently, reducing bad debt while keeping neighborly relationships.

Real-time Stock Sync & Alerts

In-store sales (scan / select to sell)

Automatically deducts inventory in real time

Hits Safety Stock → alert

One tap to the Wholesale cart

2.5 Real-time inventory sync & alerts

- Automatically deducts stock on retail sales (scan or select) and adds stock when goods arrive from the Distributor.
- Reaching the Safety Stock Threshold triggers an instant alert, with a button to jump to the wholesale ordering flow.
- A closed B2B2C loop turns FinViet into a comprehensive business management assistant.

EXAMPLE

"Product X is running low on the shelf." The store owner no longer learns about stock-outs only when a customer asks.

Two-way flows for Distributors

STRATEGIC PURPOSE

Lock Brands and Distributors into the FinViet platform

Make FinViet the only digital transaction gateway in the distribution chain.

PILLAR 3 · WHOLESALE

Primary Ordering, Inventory Sync & Rebate

3.1

Primary Ordering Gateway

- Dedicated Distributor role in the app.
- View the Brand catalog, apply Tier-1 wholesale prices, control the Credit Limit.
- Create large orders (pallet or truckload), connected to the Brand's ERP/DMS for approval and dispatch.

REPLACES

No more phone calls, Zalo messages or manual Excel files to the Brand's Admin/Sales team.

3.2

Two-way Inventory Sync

- Once a Brand order is delivered, it is automatically added to the Distributor's Available Inventory.
- Stock is immediately visible to Merchants in the region (instant secondary sales).
- When a Merchant orders and delivery

VALUE

Real-time Visibility: compare Sell-out with Sell-in to optimize inventory turnover.

3.3

Target & Rebate Tracking

- Track the remaining credit limit and payment terms with the Brand.
- Sales progress bar against monthly or quarterly targets to earn Rebates / Kickbacks.

RESULT

Ends end-of-period reconciliation disputes. Distributors can clearly see how much more is needed to reach the bonus milestone.

Voice/Visual Search & AI Chatbot

4.1 Voice & Visual Search

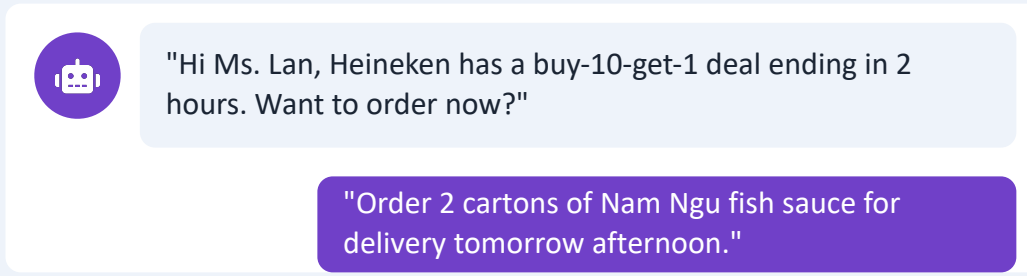

- Voice Search: large mic button, understands Vietnamese across regional accents and trade slang.
- Visual Search: photograph boxes, cans and packaging (even with a torn barcode); AI identifies the exact SKU and shows wholesale prices.

EXAMPLE

"Two cases of Tiger Bac beer" · "find sour & spicy instant noodles". Store owners aged 40–60 don't need to type.

4.2 AI Chatbot: Push Sale & Chat-to-Order

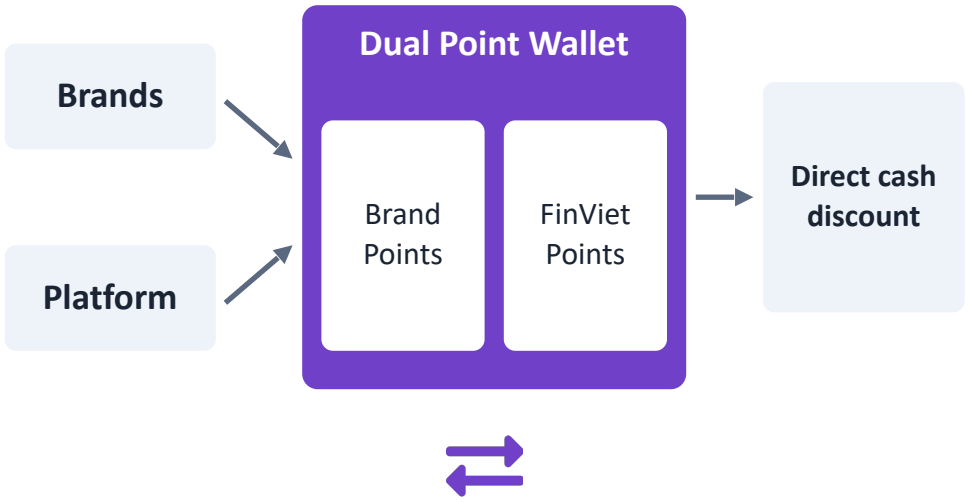

- The FinViet virtual assistant proactively pushes sales: personalized deals timed to when the store is about to run out.
- Chat-to-Order: send a text or voice message, and the cart is created automatically with the best discount code applied, followed by a "Tap to confirm order" button.

RESULT

Mirrors the habit of ordering via Zalo chat, shifting the platform from passive to proactive selling.

Loyalty Club & Dual Points Wallet

Exchange Gateway: Brand Points ↔ FinViet Points

Burn Points for Discount: use Brand X points to deduct directly from Brand X orders.

4.3 Earn, spend & exchange points

- FinViet Points: earned from wholesale purchases, POS retail sales, daily check-ins and games; redeemed for platform-wide vouchers or store supplies (umbrellas, raincoats, signboards).
- Brand Points: earned separately for each Brand; Burn Points deduct directly from that Brand's orders.
- Point Exchange Gateway: converts Brand ↔ FinViet at a preset rate, releasing "frozen" points.

EXAMPLE

VND 100,000 spent = 10 Unilever Points. 100 Unilever Points = VND 10,000 off OMO / Knorr purchases, or ↔ 80 FinViet Points.

Daily Gamification

4.4.1

Daily Missions

- Daily check-in.
- Complete 3 retail orders early in the day.
- Place 1 wholesale order over VND 500,000.
- Receive FinViet Coins or a spin ticket.

GOAL

Habit Formation: open the app every day, not just 1–2 times a week when restocking, for sustainable DAU / MAU growth.

4.4.2

Grow a tree / Piggy bank

- Light mini-game: water the tree or feed the piggy bank each day.
- A fully grown tree yields VND 50k or 100k discount vouchers when wholesale stock is ordered.

MECHANIC

Dopamine Loop: small, instant rewards create moments of joy during quiet time at the counter.

4.4.3

Lucky wheel / Shake for coins

- Spin during the lunch break (12–1 p.m.) or after completing a successful order.
- Win phone top-up scratch cards, free-shipping vouchers or FinViet Points.

REWARDS

Makes the app a close companion in the store owner's daily routine.

AI Vision Audit (Shelf Display)

5.1 Self-register & AI-scored shelf display

Core principle: every task that previously required a Sales rep on site is now handled 100% by the Merchant in the app.

BEFORE (Manual)

Sales reps carry contracts to persuade store owners to sign display packages, then visit periodically to photograph shelves with the DMS app for manual scoring by Trade Marketing. Taking photos eats up 25–30% of each visit.

AFTER (Self-service)

Merchants self-register for a package and photograph shelves using the standard frame. AI scores them, and rewards go straight into the Wallet within 24 hours. Transparent, with no worry about Sales forgetting to take photos.

- Merchants choose each Brand's display package (Gold / Silver / Bronze; facade, end-cap, etc.), view sample photos and reward levels, then tap "Register to join".
- Take photos using the standard corner-frame overlay (Planogram Guide Overlay). AI Image Recognition scores Facings, Share of Shelf and SKU order.
- Anti-fraud: blocks uploading photos from the gallery, requires store GPS, and adds a date-time watermark.

RESULT

Once the standard is met, rewards go into the Merchant Wallet within 24 hours, with no intermediary approval.

Trade Promotion Tracking

5.2 Self-register & track accumulation programs

BEFORE (Manual)

Sales reps explain the rules, verbally note "this month only 40 cases collected, 60 still to go", then bring a form to collect a signature when paying out the reward.

AFTER (Self-service)

Merchants join on their own, track progress on the Progress Tracker and receive rewards automatically when they reach a milestone.

"15 cases remaining · 5 days left"

- Self-Enrollment Hub: accumulation programs from Brands (volume targets, timeframes, reward structure) → "Join now".
- Real-time Progress Tracker: purchased / committed target / days left, automatically calculating the remaining gap.
- Automatic payout at milestones: discount vouchers, money into the wallet or bank, or promotional goods bundled with the next wholesale order.

EXAMPLE

"You are only 15 cases away from the VND 1,000,000 milestone reward, with 5 days left." The progress bar updates after every order, encouraging the Merchant to order again.

POSM Request & Self-service RMA

5.3 Self-registration POSM & Assets

- View sponsored programs (Coca-Cola / Tho Phat fridges, Masan seasoning shelves, umbrellas), read the commitment terms, tap to register, and photograph the location.
- Logistics dispatches the technical team for installation. The Merchant confirms the handover via OTP / e-signature.

RESULT

From several weeks down to a few days. No more Sales reps holding up paperwork or favoring familiar stores.

5.4 Self-service RMA Ticket

- "Report product issue" on each order: select the faulty item and reason (broken, leaking can, near expiry), and attach a photo or video.
- Tickets go straight to the Distributor's customer service / warehouse. The warehouse approves and replaces items on the next delivery.

RESULT

Sales reps are no longer the ones handling returns. Issues are resolved quickly and transparently using system data.

CONVERSION POWER

B2B2C Closed Loop

SYNTHESIS INSIGHT

The 24 core improvements do not work in isolation. POS retail data feeds the AI Recommendation, automatically deducts inventory and places orders with the Distributor, while retaining Merchants every day and automating Trade Marketing. Each link is part of a frictionless ecosystem loop.
